PROFILE

Enthusiastic and detail-oriented Computer Science major with a strong foundation in Java programming and a keen interest in web development. Adept at applying coding skills to create compelling software tools. Currently seeking opportunities to contribute as a Software Engineer Trainee, with a focus on collaborative development projects. Proven ability to engage in social activities, build community connections, and network effectively. Eager to bring my programming expertise, particularly in Java, to Google Inc.'s dynamic team and deliver impactful solutions. Excited about the prospect of a internship between May and August 2024 to further enhance my skills and contribute to innovative projects at Google.

PROJECTS

E-commerce website

- Developed a fully functional E-commerce website using HTML and CSS, allowing users to browse products, add items to the shopping cart, and complete secure online transactions.
- Contributed to the project by coding the frontend, designing the layout, and optimizing website performance.
- Github link :- <https://github.com/Neyaj-2004/E-commerce-website.git>

Netflix Clone Website

- Developed a Netflix clone website using HTML and CSS, aiming to recreate the frontend user interface of the popular streaming platform.
- Implemented key features including a homepage with recommended shows, search functionality, and a responsive layout for optimal user experience.
- Implemented responsive design principles to ensure the Netflix clone website seamlessly adapts to various screen sizes and devices, providing an optimal viewing experience for users on both desktop and mobile platforms.
- Hosted the Netflix clone website and made it publicly accessible. View the project live: <https://neyaj.freewebhostmost.com/>

INTERESTS

- Actively pursuing continuous learning in full-stack web development through online courses and self-directed study.
- Engaging in hands-on projects to develop dynamic web applications, showcasing proficiency in both frontend technologies.
- Staying informed about the latest trends and technologies in both frontend (HTML, CSS, JavaScript) and backend (Node.js) development
